

Handout – Language Master

Environmental dangers of AI

By Natalia W.

Key vocabulary:

- **Artificial intelligence:** computer system that has some abilities of human brain, like solving skill, learning from data and interpreting language
Example: *Artificial intelligence has been a game changer in this decade*
- **Generative AI :** subfield of AI, that have ability to produce text, images, videos or other form of data.
Example: *The development of generative AI is the result of decades of research and development*
- **Data centre** – facility used to store computers systems and associated components like data storages system and cooling mechanisms
Example: *Data centres are crucial for training and developing AI models.*
- **Environment:** objects, conditions or circumstances that surrounds someone; in ecology all natural materials and living things.
Example: *it has also been a contributing factor to the devastation of the environment*
- **Carbon emission** – CO₂ produced by plane, cars, data centres etc.
Example: *It is estimated that the data centres account for up to 3,7 percent of global CO₂ emissions.*
- **Water cooling** – method of heat removal used in data centres
Example: *The water cooling is generally more efficient than air cooling.*
- **Deep learning** – type of machine learning used in developing generative AI, inspire by neuroscience
Example: *These models are based on deep learning*
- **Parameters** – set of facts that describes how something should be done
Example: *using a type of neural network architecture, which uses billions of parameters and connections*

Academic language:

- **Cohesive Devices:** However
- **Reporting Verbs:** researching, reviewing , analysing, with this research, dig
- **Hedging Language:** could be
- **Other:** estimated, ensure, highlighted, dig into a problem, break down research

Tonal language:

- **Unresponsible consumers** - clients, who update their technology, even when they don't have to
- **Unnecessary questions** – author prefers to use Google to look for answer, because it use less power
- **Tasteless, odourless water** – author doesn't like water
- **Treating it like a toy** – author doesn't approve of using AI tools for fun

- **Unnecessary use of AI**- author doesn't approve of using AI for fun or when there are other options
- **Catastrophic event** – author wants to show how bad shortage of water would be

Exercise 01 - Gap-fill:

Complete the gaps with words below. You may need to change some words:

Environment	Data Centre	Development	Air	Recycle	Fresh water
-------------	-------------	-------------	-----	---------	-------------

1. My kid learned today at school about Now he knows that he should throw glass in green bin, not the yellow one!
2. We are worried about our child
3. In few years we may be in shortage of.....
4. Our localis thriving, since we planted all that trees!
5. My power bills increased by half last month. It's probably because ofThat was built near my neighbourhood.
6. It's so hot here since theconditioner had broken.

Exercise 02 - Matching

Match words with their definitions:

Copper	process of growing and changing
Wildlife	metal commonly use in electrical wiring
Carbon footprint	all natural materials and living things
Development	very bad; causing sudden and great harm
Environment	measurement of the amount of carbon produced by company
Catastrophic	animals living in natural environment

Environmental dangers and ecology

Water pollution

Carbon footprint

Green practices

Solar Panels

Wind turbines

Recycle

Filtered water

Artificial Intelligence

Data Center

Deep learning

Parameters

Development
